## Australian made with a 10 year warranty

We offer a very generous 10 year pro rata warranty on the structure of the unit, and a 3 years full parts and labour warranty (in Melbourne metropolitan areas only) on all other components.

ENERGY NOTE: Aqua Breeze Evaporative cooler is almost 5 times cheaper to run in comparison to the comparable compressor driven air conditioner.

### Water and Power saver.

- The technologically advanced Aqua Breeze is a perfect blend of style, structure and performance
- A robust marine grade no rust Aluminium frame inside
- Pre wetting cycle ensures cool fresh air - first time, every time.
- Self clean base features, super quiet fan, aerodynamically designed venturi and algae resistant black water tubes
- Specifically designed for easy service and maintenance.
- Cabinet constructed from durable UV resistant Luran S.
- Automatic water dump cycle ensures unit remains dry when not in use
- User friendly and ergonomically designed digital display wall controller

## Cool Quiet Comfortable

### How Aqua Breeze works.

The Aqua Breeze ducted evaporative cooling unit is unobtrusively located on the roof of your house. This unit draws in the hot outside air and as it passes through moistened pads in the unit this air is cleaned, cooled and filtered. From there it is quietly circulated through ceiling ducts creating cool, refreshing air in each ducted room of your house.

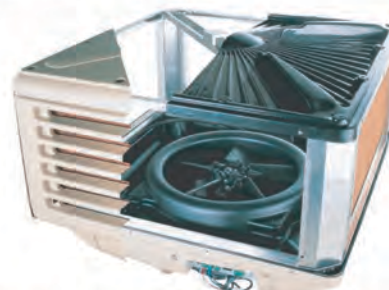

### Fresh, naturally clean air.

Although Aqua Breeze evaporative cooling is technologically sophisticated, the basis of the system goes back to nature. Just as an ocean breeze is always cool, the passing of air over water is a natural way of cooling. With the doors and windows open for maximum efficiency, Aqua Breeze will continually replace the air within your home and provide cool clean fresh air whilst expelling airborne germs, - a great benefit for many allergy sufferers.

**Unique Framed Water Pads** - 90mm honey-combed fluted cooling pads, standard throughout the Aqua Breeze range, in conjunction with the overall surface area guarantees optimum cooling efficiency. The unique design allows for larger pad area without compromising the appearance of the unit. Pads are encapsulated in marine grade Aluminium frames for longer life and easy replacement.

**Draft resistant weathershield** - Concealed (under the fan) automatic weather seal blocks drafts and heat loss when unit is not in use.

**Aerodynamically balanced impeller** - The super quiet fan and motor assembly features a "Hushdrive" motor and snap and lock connection for ease of installation and service. The aerodynamically designed bracket increases airflow and reduces air noise. Location lugs lock the bracket in position.

**Two step Aerodynamic base** - The unique Aqua Breeze base "cavity" design allows unrestricted airflow to provide maximum cooling efficiency without any obstructions.

**The Perfect blend of style, structure and performance** - The sleek, rounded low profile compliments any home.

**User friendly wall controller** - The multi function digital wall controller automatically takes care of your cooling requirements, room temperature, fan speed and run time at the push of a button. The thermostatic control offers 10 comfort levels and saves you money on your power bills. It also features a fan only ventilation mode.

**Motor Controller** - The electronic control board safely sits under the cooler cavity and is easily accessible for maintenance and servicing. All the electronics remain under the tightly sealed cover isolated from the outside environment.
